FARM MANAGEMENT SYSTEM

PHASE 1 – IDEATION PHASE

1. Overview

The Ideation Phase identifies the problems faced by farmers, farm managers, buyers, and system administrators and develops possible solutions for the Farm Management System.

2. Problem Statement

- PS-1 Farmer: Maintain farm and crop records. Data is often incomplete or incorrect because records are kept manually in registers, causing frustration and confusion.
- PS-2 Farm Manager: Monitor farm productivity and sales. Reports are delayed and inaccurate because data is scattered across files and sheets, causing stress and inefficiency.
- PS-3 Buyer: Access crop availability and pricing. Information is not updated regularly because there is no centralized digital system, causing uncertainty and dissatisfaction.
- PS-4 System Admin: Manage user access and system security. Unauthorized access may occur because access control is handled manually, causing concern and insecurity.

3. Empathy Map Canvas

- Target Users: Farmers, Farm Managers, Buyers, and System Administrators.
- Think & Feel: Need accurate and timely farm data.
- Hear: Feedback from agricultural officers.
- See: Registers, paper files, and spreadsheets.
- Say & Do: Enter records manually.
- Pain: Data loss, errors, and delays.
- Gain: Automation and fast reporting.

4. Brainstorming

- Manual farm records
- Excel-based management
- Web-based system
- Mobile farm app
- Salesforce-based FMS

5. Selected Idea

Salesforce-based Farm Management System.
